

ShinyDocs

Goal: Learn how to build an interactive webpage using R and ShinyDocs

References:

<http://shiny.rstudio.com/>

<http://bit.ly/shiny-quickstart-1>

Instructions:

Your ShinyDoc will be based on the simple regression you built for Homework2. You will plot scatter plots of sales vs different advertising channels. The plot displayed will be configured by the selection of items in a dropdown.

To elaborate,

Your ShinyDoc will have a dropdown with a list of 3 options - TV, Radio and newspaper as an input element.

Your output will be a scatter plot between sales and the input option chosen from the dropdown.

You will write your code in a file called app.R

To be turned in:

A new folder in an already existing repository

- Stat159Labs/lab8

The folder has the following files

- advertising.csv
- app.R
- Readme
